Professional Summary

Financial Systems and ERP Administrator specializing in Microsoft Dynamics 365 Business Central across a 100+ legal entity environment running Binary Stream MEM. Experience spans production Great Plains to Business Central migration, v27 and v28 upgrade testing, security and licensing audits, and custom AL extension development to close native functionality gaps. Background in Microsoft 365 and Azure AD administration bridges IT infrastructure with finance operations.

Education & Certifications

General Studies A.A. (Focus on I.T.), Macomb Community College — **Jan 2022**

MB-800: Dynamics 365 Business Central Functional Consultant Associate — **May 2026**

CompTIA Network+ — **Feb 2025**

CompTIA A+ — **Aug 2024**

Technical Skills

ERP & Financial Systems: Dynamics 365 Business Central, Binary Stream MEM, Datarails, Yooz, Expensify, Fastpath, Solver

Business Central: AL extension development, permission sets and security roles, dimension configuration, approval workflows, EFT/ACH and positive pay, intercompany setup, upgrade testing

IT & Platforms: Microsoft 365, Azure AD / Entra ID, PowerShell, RMM platforms, Cisco Meraki, Jira Service Management

Experience

Financial Systems and ERP Administrator, Hallandale Beach, FL — **May 2025 to Present**

- Serve as primary system administrator for Microsoft Dynamics 365 Business Central across 100+ legal entities running Binary Stream MEM, alongside Datarails, Yooz, Expensify, Fastpath, and Solver.
- Built and deployed a custom AL extension enabling vacation delegation of approval workflows, closing a gap in native Business Central functionality that had required manual reassignment during user absences.
- Built a second AL extension that holds changes to vendor bank details until a second person approves them, closing a payment-fraud gap that native Business Central approval workflows don't cover.
- Completed a project transitioning validation from Great Plains legacy G/L conversion mapping to default dimensions, eliminating recurring manual mapping across entity, division, and department combinations.
- Conducted User Acceptance Testing for the Business Central v27 and v28 upgrades, tracing downstream impacts across permission enforcement, posting behavior, and report field changes prior to production deployment.
- Lead quarterly security and licensing audits covering permission sets, Premium versus Team Member license allocation, and Binary Stream MEM licenses; manage full user lifecycle enforcing segregation of duties.
- Implement third party extensions and collaborate directly with Microsoft ISV partners to integrate custom financial solutions.
- Develop and maintain structural data dictionaries standardizing system terminology, reporting matrices, and intercompany dimension coding.
- Operate the finance help desk through Jira Service Management, resolving ERP and reporting issues for accounting, AP, and FP&A stakeholders.

MSP Tier 1 IT Support Specialist, Applied Innovation, Southfield, MI — **Sep 2024 to May 2025**

- Diagnosed and resolved end user issues spanning Windows OS errors, Microsoft 365 applications, VPN connectivity, and print services.
- Performed Microsoft 365 and Azure AD administration: user accounts, password resets, group membership, sign in security alerts, MFA settings, application access, and email quarantine.
- Managed endpoint software via RMM tools, deploying security and VPN agents, performing scripted application removal using PowerShell, and monitoring device status through Cisco Meraki dashboards.
